

Assalamu Alaikum Shaun bhai, sorry for the delay — rojar din e time short chilo. Nicher point gulo clear update dilam, jate apnar sob pending prosno er answer thake:

1) UI Link

Hosting er jonno arakta jinish dekte silam tai dete pari nei

2) Backend Direction (from current codebase)

- Language/Framework: `Node.js + Express`
- Database: **PostgreSQL final**, ekhono JSON store diye MVP test hocche.
- Realtime: `WebSocket` (chat/presence)
- Storage: local now (later S3/Cloud storage)

3) Backend Features Already Implemented (Code Status)

- Auth + Role system (Buyer/Factory/Buying House/Admin/Owner/Agent)
- Users + Profiles
- Buyer Requirements
- Company Products
- Combined Feed (buyer requests + products)
- Documents + Contract Vault
- Verification + Subscription
- Messaging + Conversations
- Partner Network
- Calls (scheduled/history/recording)
- Ratings & Reviews
- Org Members + Permissions
- Notifications
- Analytics Summary + Admin Dashboard

4) Analytics (Current Implementation)

Backend e already `summary` + `dashboard` analytics built.

Current metrics include:

- total events + event by type
- open buyer requests
- active chats (unique)
- connected partners
- contract documents
- factories count
- monthly series for requests/chats/documents

Apnar “B2B Marketplace Owner 5 core metrics” (Buyer→Supplier Match rate, Active Buyer/Supplier ratio, etc.) er moddhe **5 ta prioritized** jeita apni mention korechen — oigula **next iteration e implement** korbo.

Apni just confirm koren final definition/formula gula.

5) Moderation / Haram Content Filter

Ekhon product video moderation **rule-based keyword check** diye thaka ache (no ML/API yet).

Apnar request onujayi **multi-step enforcement** implement korbo:

- Offensive content/communication auto delete
- 1st warning + full guideline notification
- 24h restriction
- 48h restriction
- 7 days restriction
- final ban
- paid appeal to reopen (if you approve)

6) Third-party Contact Sharing Control

WhatsApp/phone/email link share **auto detect + delete + warning** feature plan e ache.

Aro strict filtering chaan? e.g. `+880`, `wa.me`, `@gmail.com`, `fb.com` etc.

7) ML/API Cost Concern

ML/API based image/porn detection **expensive**, so we will start with:

- rule-based text/keyword screening
 - community report system
 - manual review queue
- If later budget allow, ML moderation add korbo.

8) Documentation

Apnar request onujayi **full doc** dibo:

- “What features exist”
- “Why created”
- “Current status”
- “Next steps”

Ami eta assemble kore **tonight / tomorrow** pathabo.
