

this project plan: Core Features and Operational Workflow Smart Notifications: Once a user searches for a specific product, the system will send notifications for similar types of products in the future.

International Marketplace & Customization: As an international platform, buyers will have a dedicated profile to post specific requirements, including custom designs and detailed product needs.

Company Cataloging & Interaction: Companies can post their existing products. The platform will allow users to comment, share, and report these posts.

Messaging Hierarchy: To prevent spam on request posts, verified users will be prioritized. Initially, a verified user's first message will go directly to the inbox, while others will remain as requests to avoid clutter.

AI Chatbot & Virtual Meetings: The platform will use a chatbot to handle initial general conversations based on the buyer's data. If requirements align, users can initiate audio and video calls directly through the app.

Mandatory Video Calls: Being a B2B platform, video calling is a core requirement for building trust.

Call Recording: All calls made through the platform must be recorded for security and record-keeping.

Secure Documentation & Banking: To prevent fraud, the platform will facilitate the exchange of banking information (such as transaction numbers required for local bank withdrawals).

Digital Contracts: While the platform doesn't handle direct financial transactions, users can confirm orders via digital signatures. A PDF version of the contract will be provided to both parties and stored in the system for legal security.

User Experience and Growth Strategy Social Media-Style Design: The interface will be designed like a familiar social media platform to ensure ease of use for everyone.

Search & Filters: Standard searches are 100% free. However, specific restrictions or subscription models may apply for unlimited use of advanced filters.

Target Audience: The primary focus is on foreign buyers and Bangladeshi garment/textile factories, with an initial emphasis on attracting Buying Houses to find customers.

AI Automation & Monetization: Auto-Replies: AI will provide temporary automated responses for industry pages based on their data.

Revenue Model: Instead of charging for account creation, the platform will offer profile boosting. Rating System: The system will generate ratings and collect feedback automatically to ensure transparency, as manual ratings are often overlooked.

Onboarding & AI Assistance: To eliminate complexity, an AI assistant and side-descriptions will explain every setting and feature.

Support for New Profiles: To ensure fair competition, new profiles will receive high organic reach for free to help them establish a presence without initial investment.

Industry Specificity & Efficiency: * Niche Focus: The app focuses strictly on the Garments and Textile industry, using simple filters (e.g., shirts, pants, gender-based clothing) to reduce complexity.

Time Saving: AI will handle the bulk of preliminary negotiations so that factory officials only spend time on serious buyers.

Account Types and Management Account Categorization: Buyer Account: For international companies or direct buyers.

Factory Account (Seller): For single factory owners.

Buying House Account (Special): An organization-based entity that can manage multiple factories simultaneously.

Enterprise Management: Organization owners (like Buying Houses) can create one main account and grant different access levels/permissions to multiple staff members using unique IDs and passwords. This enterprise-level access can be offered as a subscription service.

This work given by buyer here's more data: [2/22, 10:24AM] Shakibul hasan Shaun: Jokhon buyer kuno request post kore thon jeno onek option er

Pasa pashi customaiz option thake, jekhan theke se normal text likhe bistarito bornona dite parbe [2/22, 11:24AM] Shakibul hasan Shaun: If someone wants to verify his profile,

Then he has to update certain information, which are some licenses

Once those licenses are uploaded and our back end verifies them,

The names of those licenses will be written and there will be a tick mark, verify will be written next to it one after another,

And no one will ever be able to buy the verified option here permanently, subscription will be applicable for this,

It will be renewed every month,

✅ Factory (6)

1. Company Registration – Registrar of Joint Stock Companies and Firms → Whether the company is legally registered Confirm
2. Trade License → Confirm whether the business is active
3. TIN – National Board of Revenue → Verify whether the tax entity is legitimate
4. Authorized Person NID → Identify the responsible person
5. Company Bank Proof → Confirm whether the payment will go to the right company
6. ERC – Office of the Chief Controller of Imports and Exports → Confirm whether it can legally export

✅ Buying House (5)

1. Company Registration → Legal entity
 2. Trade License → Active business
 3. TIN → Tax entity is legitimate
 4. Authorized Person NID → Identify the responsible person
 5. Company Bank Proof → Transparency of financial transactions

[2/22, 11:25AM] Shakibul hasan Shaun: If at least one security is ensured, then [2/22, 11:25AM] Shakibul hasan Shaun: Getting a verification batch from us will not be worthless [2/22, 11:26AM] Shakibul hasan Shaun: Later, I will put some more optional licenses. The more you give in this license, the more it will be accepted internationally. Please mention this. [2/22, 11:29AM] Shakibul hasan Shaun: If someone wants to buy a verification batch, the above information is mandatory. We will also put the option to provide many optional information. I will give you these later, which they can update even without buying verification. And those are not mandatory either.

But write down the more licensing proof there is, the more its credibility is. The easiest way to attract foreigners is to have the highest chance of getting a buyer. Write it in a professional way using gpt or something else. [2/22, 11:45AM] Shakibul hasan Shaun: If you want to verify the buyer's account, This information will be needed if they want to take the batch. In this case, take a little effort to find out the list of countries included in the EU. EU Business Registration (Registration) Ensures that your company is legally recognized in the EU. Security: Legal validity, proof of company identity and tax liability. VAT Number Recognized ID for sales of goods/services tax in the EU. Security: Verification of taxpayer validity; Security of trade transactions in the EU VAT system. EORI (Economic Operators Registration and Identification) ID used in customs trade/import-export. Security: Company validity in customs processes; Authorization and tracking of international shipments. Bank proof Proof of a valid company account in the bank. Security: Legality and credibility of financial transactions; Reduce piracy/fraud. USA Business Registration Ensures the legal validity of the company. Security: Legal recognition, legal protection in contracts or transactions. EIN (Employer Identification Number) Tax ID issued by the IRS. Security: Taxpayer recognition; Federal tax transaction validity. IOR (Importer of Record) Customs Trade/Import Identity. Security: Legal confirmation in import-export; Reducing risk in customs fines or transactions. Bank proof Proof of transparency and validity of financial transactions. Security: Preventing transaction fraud; Credibility in transactions. EU: Business Registration + VAT Number + EORI + Bank proof USA: Business Registration + EIN + IOR + Bank proof [2/22, 11:47AM] Shakibul hasan Shaun: Apu, please summarize the isolated information in my answer to yourself, Otherwise, we may face problems in the future.

[2/16, 9:08PM] Cyber Code Master: Hero Section & Search: The document mentions that users will be notified based on what they search. Should the homepage prominently feature a large search bar with "Garments" and "Textile" as the primary filters? [2/16, 9:08PM] Cyber Code Master: Content Feed: Since the platform should be like a social media site, will the homepage feature a combined scrollable feed of "Buyer Requests" and "Company Product Posts"? [2/16, 9:08PM] Cyber Code Master: Video Integration: The document mentions a video upload option. Should there be a dedicated "Reels" or "Video Feed" tab on the homepage, or will videos simply appear in the main feed? [2/16, 9:09PM] Cyber Code Master: AI Assistant Placement: There is a requirement for an AI assistant to explain features. Should this be a floating chat bubble available on all pages, including the homepage? [2/16, 9:12PM] Shakibul hasan Shaun: In this case, I have both comments: It will work if the search option is kept simple, and it will work if you do what you say,

In this case, you give more priority to uniqueness [2/16, 9:15PM] Shakibul hasan Shaun: There will be a combined feed and there will be many options below, there will be only buyer requests and company product options separately,

But if these two names are written so big here, then there will be a problem. In this case, you should adopt a different way, it can be with a symbol,

But when that symbol is clicked, the text above will be written in large Buyer requests, Company products [2/16, 9:16PM] +60 17-726 0362: make it floating [2/16, 9:18PM] Shakibul hasan Shaun: That is, you mean that like on YouTube, there are many options below, there is a reels option something like that,

But there is no need to separate the two options below, [2/16, 9:19PM] +60 17-726 0362: Which one is better? [2/16, 9:24PM] Cyber Code Master: User Dashboards: Since there are three account types (Buyer, Factory, and Buying House), will each have a unique dashboard? Specifically: Buying House Dashboard: Will this include a dedicated "Team Management" page to assign different IDs and permissions to members? Factory Dashboard: Will this include a "Product Management" page for posting their items? [2/16, 9:24PM] Cyber Code Master: Meeting & Communication Hub: The document requires video/audio calling and call recording. Should there be a dedicated "Meeting Room" page where recorded calls and meeting schedules are stored? [2/16, 9:24PM] Cyber Code Master: Order & Contract Page: Since you mention digital signatures and PDF contract generation, will there be a "My Orders" or "Contracts" page where both parties can view and download these documents? [2/16, 9:24PM] Cyber Code Master: Subscription/Enterprise Page: You mentioned selling Enterprise subscriptions for Buying Houses. Will there be a "Pricing" or "Upgrade" page detailing the benefits of these plans? [2/16, 9:27PM] +60 17-726 0362: yeah unique [2/16, 9:28PM] +60 17-726 0362: @Shakibul Hasan Shaun [2/16, 9:46PM] Shakibul Hasan Shaun: There will be a Buyer dashboard: it will have a feed and notification system based on search.

However, one common problem with current social media platforms is that once you start watching a certain type of video, similar content keeps appearing, and you rarely see anything unique or different.

To solve this, there will be an option in the top corner to enable or disable a “Unique” button if needed.

Buying House dashboard: There will be a management option where free users can, for now, create up to 10 IDs each with any name, but the same name cannot be used twice.

A password can be set for each ID. Using these, agents working in the Buying House will be able to log in.

These regular employees’ dashboards will not have a separate Team Management section or any similar buttons.

(However, the “Unique” button will be available everywhere.)

There will be a connected option through which they can choose which Buying House accounts they want to stay connected with.

Factory accounts can send requests using their account ID numbers, and these requests can be accepted by the factories.

A list of which factories are connected will be available within each Buying House account in a specific option. (It would be good if you could decide what name to give that option.)

Factory: There will definitely be a Product Management page, from which users can post regular items, videos, or reels. However, the Terms and Conditions will specify that no music can be used, and prohibited instruments are not allowed.

Requests from Buying House accounts, which will appear as notifications, can be accepted from there. [2/16, 9:48PM] Shakibul Hasan Shaun: No, these are not necessary; the call buttons will be available directly on the chat interface. [2/16, 9:49PM] Shakibul hasan Shaun: Yes [2/16, 9:49PM] Shakibul hasan Shaun: Yeah [2/16, 9:50PM] Shakibul hasan Shaun: We will write a list of the benefits here later, for now, just create a subscription plan, The cost of which will also be set later [2/16, 9:57PM] Shakibul Hasan Shaun: Try to make it a more unique, keeping in mind the perspective of business users. [2/16, 10:09PM] Cyber Code Master: Social Layout: You want the platform to look like a normal social media platform. Should the layout follow a specific style (e.g., like LinkedIn for professional networking or Instagram for product visuals)? [2/16, 10:09PM] Cyber Code Master: Onboarding Flow: Since you want “zero complexity” in account creation, do you want a multi-step onboarding wizard that helps users set up their “Organization” immediately after signing up? [2/16, 10:09PM] Cyber Code Master: Verified Badge Visuals: How should “Verified Users” be visually distinguished in the comment sections or search results to ensure they stand out to buyers? [2/16, 10:11PM] Shakibul hasan Shaun: Linkedin [2/16, 10:12PM] Shakibul hasan

Shaun: Do what works best here, [2/16, 10:15PM] Shakibul hasan Shaun: One thing here is that once a verified user sends a message, it is supposed to block other messages, that will not happen,

There verified users will be able to message directly, unverified users will be able to message but they will remain as message requests like Facebook Lite ,

The second thing is that I did not understand what you said exactly, but in this case it is desirable that the batches are clear, and there will be a different color of verified text [2/17, 10:37AM] Cyber Code Master: Feed icons and labeling: You said that it is better to use small symbols or icons instead of large text for 'Buyer Requests' and 'Company Product Posts'. Clicking on these icons will show the names. Do you have a specific symbol for these icons (e.g. 'bag' for buyers and 'factory' for companies)? [2/17, 10:38AM] Cyber Code Master: Unique button: There will be an option to turn on/off the 'Unique' button in the top corner of the homepage. Will this only affect search results, or will it also change the feed algorithm? [2/17, 10:38AM] Cyber Code Master: Video/Reels location: Will videos or reels be displayed directly in the main feed (LinkedIn style) without a separate tab, or will there be a separate section within the factory profile? [2/17, 10:46AM] +60 17-726 0362: icon apni onno design theke nen [2/17, 10:46AM] +60 17-726 0362: amader figma design dorkar [2/17, 10:46AM] +60 17-726 0362: bujhlam na [2/17, 10:46AM] +60 17-726 0362: alada section [2/17, 10:52AM] Shakibul hasan Shaun: The algorithm will change, [2/17, 10:54AM] Shakibul hasan Shaun: Here I am saying one thing: There is no need to have a separate section like there is a separate section below on YouTube, But a separate section can be kept inside the profile, [2/17, 11:27AM] +60 17-726 0362: ha [2/18, 11:18AM] Cyber Code Master: 2. Account & Dashboard Buying House Connection Options: You asked to have an option where there will be a list of factories that Buying House is connected to. Would you like to name this section "Connected Factories" or "Partner Network"? Sub-Account Limit: You said that free users can create 10 IDs. Will these IDs be able to be logged in at the same time, or will they work as separate member profiles under one Buying House account? Organization Setup: To maintain "zero complexity", can we have a short 3-step setup process (i.e.: 1. Profile Picture, 2. Organization Name, 3. Category Selection) right after opening the account? [2/18, 12:34PM] Shakibul hasan Shaun: 1)partner network

3)Yes [2/18, 12:35PM] Shakibul hasan Shaun: 2)Sub Accounts (Agents) They will be able to see: Assigned Buyer Requests Assigned Chats Connected Factories (View only) Own Performance AI Suggested Response They will not be able to see Member Management,

Main Account (Owner / Admin) Here will be: Organization Settings Member Management (Add / Remove / Permission) Partner Network (Connected Factories list) All Buyer Requests Overview All Deals / Contracts Overview Analytics Subscription / Upgrade Legal & Contract Vault Owner will be able to see everything. [2/18, 12:37PM] Shakibul hasan Shaun: How will it work after viewing Buyer Request? Step Flow: Agent Buyer Request will open AI will show auto-summary Express Interest" button will be there If Express: First message will go directly Conversation will be locked in the name of that Agent Other Agents will not be able to send

direct messages anymore There will be no internal clash.(i.e. no other member of that Buying house will be able to message anymore if they try to do so, internal notification will go to the person who sent the first message and if he gives permission, the second person can also message) [2/18, 12:38PM] Shakibul hasan Shaun: (Express interest) The name can be changed or given a simpler name! [2/18, 1:49PM] Cyber Code Master: 3. Communication & Verification Chatbot and Calling: You mentioned that video/audio calls can be made directly from the chat interface. Will the chatbot provide the option to schedule automatic calls after collecting initial information from the buyer? Verified Badge: Unverified Users' messages will be as 'Message Requests'. This Will the badges be identified by a blue tick next to the name (like LinkedIn) or some special golden symbol that is easy to spot? [2/18, 2:53PM] Shakibul hasan Shaun: 3) No

They can call if they want, it will be their personal matter,

If the option to create a schedule can be given, then it will look more beautiful

4. Do what is best in terms of signs, here color matters a lot : [2/18, 2:55PM] Shakibul hasan Shaun: 3) Chat is a specific communication, it will send a notification to the agent,

Another thing here is customization, some conversations and some information about themselves can be input, the factory and buying house, about themselves or about the factory under which the buying house will work, if a message is given by marking a product there, then the communication continues based on the information about that company,

So, more than ordinary communication, there is professional communication here, and that too with automation [2/18, 3:05PM] +60 17-726 0362: automation bujhlm na? [2/18, 3:05PM] +60 17-726 0362: we are creating an agent? [2/18, 3:21PM] Shakibul Hasan Shaun: Nope [2/18, 3:21PM] Shakibul Hasan Shaun: We will build a normal bot that handles simple conversations.

If we provide information about the company, it will respond only based on that information. If a question matches, it will give an answer; otherwise, it will say it is forwarding the query to an agent.

There is no need for a language model or anything else. An algorithm will be enough—if the question matches, it returns an answer; otherwise, it does not. [2/18, 5:17PM] +60 17-726 0362: Then its just a faq bot. Have some fixed answers and it forwards it to an agent? who is that agent? [2/18, 5:18PM] Shakibul Hasan Shaun: Agent means: Buying house account owner and the other members under them; factory account owner. [2/18, 5:19PM] +60 17-726 0362: i mean whats the benefits of that chatbot ? [2/18, 5:24PM] Shakibul Hasan Shaun: Firstly, there is a mistake here: the AI assistant we currently have is primarily being used to help users create accounts and understand all system account settings.

Secondly, the point I wanted to add was about having an assistant that would help with marketing, but it is not really necessary.

Therefore, the points I mentioned earlier regarding temporary user input are currently considered unnecessary.

Thanks to Arnob for pointing out the mistake; I hadn't noticed it. [2/18, 5:37PM] Cyber Code Master: 4. Payment & Subscription Subscription Plan Design: For now, we will design the plans without pricing. Will the Enterprise Subscription only have the facility to create unlimited IDs, or will there be an additional facility to boost the profile? [2/18, 5:40PM]

Shakibul hasan Shaun: There is no need to provide the boost feature for now, we will implement it in the future, [2/18, 5:41PM] Cyber Code Master: 5. Design Style (Visual Style) LinkedIn Theme: Since you have chosen LinkedIn Style for professional use, should we use the blue and white theme as the primary colors, or is there a specific color code for your company brand? [2/18, 5:42PM] Shakibul hasan Shaun: We currently don't have a color code but we are hoping for a good design [2/18, 5:57PM] +60 17-726 0362: blue and white not grey [2/19, 12:51AM] Cyber Code Master: Subject: Final Page List & Verification for Project Design

Based on our discussions, I have created the following list of pages for the platform. Please check if all the pages are here as per your plan or if there are any new ones that need to be added?

Platform Page List:

1. Landing Page (Static) - For general visitors.
2. Subscription/Pricing Plans (Static) - Package details.
3. Login/Sign-up/Onboarding (Dynamic) - Account opening and 3-step setup.
4. Main Feed/Homepage (Dynamic) - LinkedIn style feed (Buyer requests & Product posts).
5. Search Results Page (Dynamic) - Unique filters and algorithm based results.
6. User Profiles (Dynamic) - Separate profiles for Buyer, Factory, and Buying House.
7. Owner Dashboard (Dynamic) - Main admin panel (access to everything).
8. Agent Dashboard (Dynamic) - Limited panel for sub-accounts or members.
9. Member Management/Team (Dynamic) - Create IDs and set permissions for Buying House members.
10. Partner Network (Dynamic) - List of connected factories (View only/Manage).
11. Product Management/Upload (Dynamic) - Page to upload products and videos/reels.
12. Buyer Request Management (Dynamic) - Page to post customized requests for buyers.
13. Chat/Messaging Interface (Dynamic) - Chat, AI Summary and 'Express Interest' feature.
14. Video/Audio Call Interface (Dynamic) - Direct calls and call scheduling.
15. Contract Vault/Legal PDF (Dynamic) - Storage for digital signatures and contracts.
16. Notifications Center (Dynamic) - Search alerts and activity notifications.
17. Settings/Organization Settings (Dynamic) - Profile and company information changes.
18. Static Information Pages - About Us, Privacy Policy, Terms & Conditions.

Verifying Questions:

- Do you think there will be a separate "Payment History" or "Invoice" page to keep track of transactions?
- Will the "Analytics" or reports you mentioned for the dashboard be a part of the main dashboard, or will a separate dedicated page be needed for that?
- Will there be a separate "Video Gallery" tab within the profile for factory videos?

Once you confirm this list, I will start working on the design or prototype in Figma. [2/19, 6:19AM] Shakibul hasan Shaun: 1) No, because there is no direct transaction on the platform,

2. There should be a separate “Insights & Analytics” page for Enterprise Buying House.
Free users → Limited data inside Dashboard Enterprise → Dedicated Analytics Page
This is needed for selling subscriptions

3. Ha [2/19, 6:21AM] Shakibul hasan Shaun: floating temporary ai assistant, which will help
three types of users understand seating will do this only, again can connect with and
help center, a simple algorithm system and what else, didn't mention it but needed

Floating Assistant will be on all pages. [2/19, 7:18AM] Shakibul hasan Shaun:
(GarTexHub)Our domain name will be, [2/20, 9:29PM] Shakibul hasan Shaun: It seems
wrong to mention the features here while creating an account! This is usually not done by
anyone

Otherwise everything is fine [2/20, 9:36PM] Shakibul hasan Shaun: There is no need to show
any specific plan for each account here,

Show a subscription package interface for everyone,

One is free and what are the limitations there,

Another is premium!

That's all, there is no need to show anything else. Another thing to keep in mind is that this
feature of creating multiple IDs will also be available in factory accounts. [2/20, 9:38PM]
Shakibul hasan Shaun: But there is one thing here! If you can show a subscription package
based on whether a person has created an account or logged in, by maintaining a sufficient
feature list,

In this case too, there will be two options, one free and the other premium,

But the advantage here is that I can show a separate list for Factory, a separate system for
me, and a separate system for others. [2/20, 9:42PM] Shakibul hasan Shaun: Another thing:
If someone buys premium, we will increase the reach of their account a little, Don't mention
how much

2/20/26, 6:37PM - Shakibul hasan Shaun: premium plan e

Buying pattern analysis

Order Completion Certification

Dedicated support 2/20/26, 6:37PM - Shakibul hasan Shaun: added these

2/20/26, 7:24PM - Shakibul hasan Shaun: My personal comment: I like to see this,

But I want to give you a responsibility, but many big people will appear on our website,

They are all garment owners, some will buy products worth lakhs of rupees in their own country,

So we should keep this in mind,

Of course, the website should be credible, premium look and corporate friendly

So I like everything here, but I personally feel the lack of professional perspective in me, so I gave you the responsibility,

2/20/26, 7:27PM - Shakibul hasan Shaun: Let me remind you of one thing, but there will be three types of accounts here

buyer, buying house, factory, so three options should be shown or two options should be created from within the factory, one buying house and another factory, any one of these two will open,

2/22/26, 10:24AM - Shakibul hasan Shaun: Jokhon buyer kuno request post kore thon jeno onek option er

Pasa pashi customaiz option thake, jekhan theke se normal text likhe bistarito bornona dite parbe 2/22/26, 10:24AM - Shakibul hasan Shaun: Ok 2/22/26, 10:24AM - Shakibul hasan Shaun: , 2/22/26, 11:24AM - Shakibul hasan Shaun: If someone wants to verify his profile,

Then he has to update certain information, which are some licenses

Once those licenses are uploaded and our back end verifies them,

The names of those licenses will be written and there will be a tick mark, verify will be written next to it one after the other,

And if anyone ever buys the verified option here permanently No Subscription will be applicable for this,

Renewable every month,

Privacy Policy

Last Updated: [Insert Date]

This Privacy Policy explains how our B2B Garments and Textile Marketplace platform collects, uses, protects, and manages your information. Our platform connects international Buyers, Factories, and Buying Houses in a secure and professional environment. By creating an account or using our services, you agree to the practices described in this policy.

1. Information We Collect

Account Information

- Full Name
- Company/Organization Name
- Email Address
- Phone Number
- Country
- Business Verification Documents (if required)
- Account Type (Buyer / Factory / Buying House)

Business Information

- Product details and specifications
- Design requirements and customization data
- Order-related documents
- Digital signature records

Communication Data

- Chat messages
- Video and audio call logs
- Call recordings (for security and dispute resolution purposes)

Technical Information

- IP address
- Device and browser type
- Usage activity
- Search history (used for relevant notifications and recommendations)

2. How We Use Your Information

- To create and manage accounts
- To match Buyer Requests with Company Products
- To provide AI-assisted automated responses
- To enable secure chat, video, and audio communication
- To generate and store digital contracts
- To prevent fraud and ensure platform security
- To send relevant notifications based on user activity

3. Fraud Prevention Measures

Fraud Prevention & Security Measures:

- Business and identity verification process for selected accounts
- Secure digital contract generation with stored PDF copies
- Recorded video and audio calls for dispute resolution
- Controlled visibility of verified users
- Role-based access control for enterprise accounts
- Monitoring of suspicious activities
- Secure exchange of transaction reference information through the platform

4. Data Sharing Policy

We do not sell personal data to third parties. Information may be shared only:

- Between involved Buyers and Sellers for confirmed business purposes
- When legally required by authorities
- To prevent fraud or enforce platform policies

5. Call Recording & Chat Storage

All communications conducted within the platform may be securely stored. Call recordings are retained strictly for legal protection, fraud prevention, and dispute resolution.

6. Digital Contracts & Signatures

Digital signatures executed through the platform may be legally binding. A PDF copy of each contract is provided to both parties and securely stored within our system. These records may be used in case of legal disputes.

7. Data Security

- Encrypted data transmission
- Secure server infrastructure
- Multi-level authentication
- Role-based permission management for Buying House and Enterprise accounts

8. User Rights

- Update personal information
- Request account deletion
- Request a copy of stored data
- Control notification preferences

9. Cookies & Tracking

Cookies are used to maintain login sessions, improve user experience, provide relevant recommendations, and operate features such as the “Unique” feed option. Users may manage cookie preferences through browser settings.

10. Data Retention

Data is retained as long as the account remains active or as required by law. Upon account deletion, data will be removed within a reasonable timeframe unless legal obligations require otherwise.

11. International Users

As this is an international marketplace, data may be processed and stored in different countries. By using the platform, you consent to such transfers.

12. Changes to This Policy

We may update this Privacy Policy when necessary. Significant changes will be communicated through platform notifications.

13. Contact Information

For privacy-related inquiries:

- Official Email: [your@email.com]
- Facebook Page: [Your Facebook Page Link]
- LinkedIn Page: [Your LinkedIn Page Link]

By creating an account and using this platform, you acknowledge that you have read and understood this Privacy Policy.

3/4/26, 6:13 AM - Shakibul hasan Shaun: Privacy Policy

Last Updated: [Insert Date]

This Privacy Policy explains how our B2B Garments and Textile Marketplace platform collects, uses, protects, and manages your information. Our platform connects international Buyers, Factories, and Buying Houses in a secure and professional environment. By creating an account or using our services, you agree to the practices described in this policy.

1. Information We Collect

Account Information

Full Name

Company/Organization Name

Email Address

Phone Number

Country

Business verification documents (if required)

Account Type (Buyer / Factory / Buying House)

Business Information

Product details and specifications

Design requirements and customization data

Order-related documents

Digital signature records

Communication Data

Chat messages

Video and audio call logs

Call recordings (for security and dispute resolution purposes)

Technical Information

IP address

Device and browser type

Usage activity

Search history (used for relevant notifications and recommendations)

2. How We Use Your Information

We use your information to:

Create and manage user accounts

Match Buyer Requests with Company Products

Provide AI-assisted automated responses

Enable secure chat, video, and audio communication

Generate and store digital contracts

Prevent fraud and ensure platform security

Send relevant notifications based on user activity

3. Fraud Prevention & Security Measures

We take fraud prevention seriously. The following measures are implemented to protect users:

Business and identity verification for selected accounts

Secure digital contract generation with stored PDF copies

Recorded video and audio calls for dispute resolution

Controlled visibility and priority access for verified users

Role-based access control for enterprise and Buying House accounts

Monitoring and detection of suspicious activities

Secure exchange of transaction reference information within the platform

4. Data Sharing Policy

We do not sell personal data to third parties.

Information may be shared only:

Between Buyers and Sellers involved in confirmed business activities

When legally required by authorities

To prevent fraud or enforce platform policies

5. Call Recording & Chat Storage

Communications conducted within the platform may be securely stored. Call recordings are retained strictly for legal protection, fraud prevention, and dispute resolution.

6. Digital Contracts & Signatures

Digital signatures executed through the platform may be legally binding. A PDF copy of each contract is provided to both parties and securely stored within our system. These records may be used in case of legal disputes.

7. Data Security

We implement:

Encrypted data transmission

Secure server infrastructure

Multi-level authentication

Role-based permission management

8. User Rights

Users have the right to:

Update personal information

Request account deletion

Request a copy of stored data

Control notification preferences

9. Cookies & Tracking

Cookies are used to maintain login sessions, improve user experience, provide relevant recommendations, and operate features such as the “Unique” feed option. Users may manage cookie preferences through their browser settings.

10. Data Retention

Data is retained as long as the account remains active or as required by law. Upon account deletion, data will be removed within a reasonable timeframe unless legal obligations require otherwise.

11. International Users

As this is an international marketplace, data may be processed and stored in different countries. By using the platform, you consent to such transfers.

12. Changes to This Policy

We may update this Privacy Policy when necessary. Significant changes will be communicated through platform notifications.

13. Contact Information

For privacy-related inquiries:

Official Email: [your@email.com]

Facebook Page: [Your Facebook Page Link]

LinkedIn Page: [Your LinkedIn Page Link]

By creating an account and using this platform, you acknowledge that you have read and understood this Privacy Policy. 3/4/26, 6:23AM - Shakibul hasan Shaun: Terms & Conditions

Last updated: [specify date]

This platform is an international B2B Garments and Textiles Marketplace, where Buyer, Factory and Buying House connect for professional business purposes. By creating or using an account on the platform, you agree to the following terms and conditions.

1. Purpose of the Platform

To establish direct and professional connections between international buyers and Garments/Textile Factories

To ensure business matching based on Buyer Request and Company Product

To manage digital contracts, communication and verification processes in a controlled manner

The platform will be operated as a controlled business environment.

2. Account Policy

It is mandatory to open an account only for legitimate business purposes.

Accurate, true and up-to-date information must be provided.

Administrative action will be taken if incorrect, false or misleading information is provided.

The owner of the Buying House Enterprise account will create and manage a certain number of IDs.

Each user will be responsible for the security of their own login information.

3. User Conduct

The following activities are strictly prohibited and action will be taken against them:

Posting fake orders or misleading Buyer Requests

Fraudulent or misleading communications

Inducing unsafe transactions outside the platform

Uploading copyright-infringing content

Promoting illegal or prohibited products

Posting obscene, immoral or offensive content

Uploading videos with excessive musical instruments, misleading or non-commercial audio

Using copyrighted music

All media content must be published in a professional and business-like manner.

4. Buyer Request and Communication Policy

Buyer Requests must be clear, specific and business-like.

Messages from verified users will be displayed on a priority basis.

Other messages will be stored in the form of requests and displayed in a controlled manner.

Spam and irrelevant communications will be controlled.

The platform will monitor and control communications.

5. Digital Agreements and Signatures

Digital signatures executed on the platform will be considered legally binding.

A PDF copy of each agreement will be provided to both parties.

A copy will be stored in the company's system and will be used as legal evidence if necessary.

6. Call and Chat Policy

Video and audio calls made through the platform will be recorded.

All recordings will be stored only with the company.

Recordings will not be provided directly to any party, except as required by law.

Records will be used only for dispute resolution, security and legal purposes.

7. Ratings and Transparency

A rating will be provided by the platform upon successful order completion.

User performance and behavior will directly impact visibility.

Providing artificial or manipulated ratings will result in administrative action.

8. Subscription and Enterprise Benefits

Advanced management benefits will be provided to Buying House and Enterprise accounts.

Certain advanced features will be activated through upgrades.

Subscription policies will apply where applicable.

9. Liability

The platform provides a connection between Buyer and Seller.

Strong and effective security measures have been implemented to prevent fraud.

If the user violates the platform's policies, verification processes, or security instructions and suffers damage as a result, the user will bear the responsibility himself.

10. Account Suspension or Cancellation

Accounts will be suspended or canceled in the following cases:

Violation of terms

Fraudulent activity

Providing false information

Behavior that damages the reputation of the platform

The user will be notified before the account is closed. Warnings will be issued if necessary. In case of repeated or serious violations, the account will be permanently closed.

11. Change Policy

These Terms will be updated as needed. In case of significant changes, the user will be notified through notification.

12. Consent

By creating an account or using the platform, you agree to all provisions of these Terms and Conditions and will be bound by them. 3/4/26, 11:37AM - Cyber Code Master: Ok

3/4/26, 4:27PM - Shakibul hasan Shaun: (I made a major mistake: Sharing or using third-party communication tools like [freelancer.com](https://www.freelancer.com) is strictly prohibited by us, and if anyone does so, they will be restricted and even their account will be closed if necessary)

This policy should be highlighted and written in a more professional manner 3/4/26, 4:35PM - Cyber Code Master: hm 3/4/26, 4:35PM - Shakibul hasan Shaun: Okay 3/4/26, 4:36PM - Shakibul hasan Shaun: There was talk of three separate pinging planes for three types of accounts

3/10/26, 5:41PM - Shakibul hasan Shaun: The documentation will be about how our website works, what features are there, why they are there, etc. 3/10/26, 5:41PM - Shakibul hasan Shaun: You may have forgotten another important thing, or it is normal to remember 3/10/26, 5:41PM - Shakibul hasan Shaun: Creating the analytics features we have is complicated, 3/10/26, 5:41PM - Shakibul hasan Shaun: There must be many features within analytics 3/10/26, 5:42PM - Shakibul hasan Shaun: What will be shown, etc., may be less detailed at the beginning, but some of the main features must be there 3/10/26, 5:42PM - Shakibul hasan Shaun: What work has been completed so far, If you have a complete list of those To be continued,

Why a feature has been created, these things must be confirmed 3/10/26, 5:42PM - Shakibul hasan Shaun: So the importance of a complete documentation is immense and it is very important for me to know what work has been done so far 3/10/26, 5:43PM - Shakibul hasan Shaun: For now, I think we will have to come up with a plan together and then move forward, but if you can give a logical explanatory answer, and if it is acceptable, then there is no need to talk too much, the work will move forward accordingly 3/10/26, 5:43PM - Shakibul hasan Shaun: As you have shown in the screenshot during the front end question, even though it was not pre-planned, I liked those steps very much and the work has really progressed very nicely 3/10/26, 5:45PM - Shakibul hasan Shaun: But in the case of the back end, this method is almost extinct for now It is in the state and this is the most important part or one of the most important parts,

I want a clear idea for both sides so that the work can progress smoothly. I hope I have been able to explain. Now I expect some logical questions from you,

We will clear everything tonight, including the back-end ideas, plans, etc. In Sha Allah

So I am seeking your full support in this part 3/10/26, 5:56PM - Shakibul hasan Shaun: I don't remember everything either so I am saying it a little invertedly but listen, We need a filtering system that will remove any kind of image, photo, etc. with haram musical instruments and obscene content, will give restrictions and notifications, We need a strong system to detect these, I think it is a bit complicated,

Again, we have to be very careful that no third-party communication media can share it through our system, A strong surveillance system is also needed here, Where platforms like [Freelancing.com](https://www.freelancing.com) often cannot detect, our new technology is also a little worried about this, Because I shared my whatsapp number on [Freelancing.com](https://www.freelancing.com) more than once, I did not know the guidelines then, but if such a crime is detected there, a fine of up to several hundred dollars and the account can be closed,

I am afraid that despite their huge water, they are making mistakes in these matters. We are a new and small team.

Also, the important thing is that if a third-party communication medium is shared, it can cost us \$100 to \$200. We can lose our target users here, so this is even more important.

But many people do not directly share any third-party communication medium. They write Add the rate in one place, write the Gmail name in another place, and then connect through it. We have to try to identify such difficult things.

But the subject is quite broad.

3/10/26, 10:01PM - Cyber Code Master: Assalamu Alaikum Shaun bhai, thanks for the detailed guidance. I'm on it and fully aligned with your concerns. Here's a clear update + plan + questions so we can finalize tonight In Sha Allah.

Current Status (Short)

- Frontend: UI complete and stable (as shared in screenshots).
 - Backend: Core services (auth, users, messaging, files, calls) are in progress. Using JSON for now; DB not finalized.
 - Documentation: I will deliver a full structured doc (features + logic + reasons + status + next steps) immediately after we align on backend plan.
-

Backend Direction (Proposed)

- Language/Framework: Node.js + Express
 - Database: PostgreSQL (preferred) or MongoDB (if you want schema flexibility).
 - Realtime: WebSocket for chat/presence.
 - Storage: Local now, later S3/Cloud storage.
 - Analytics: event-based tracking (user actions, messages, conversions, search, match, contract flow).
-

Critical Safety/Compliance (Your Priority) We will implement 2 strong systems:

1. Content Moderation Pipeline

- Detect + block: pornographic images, haram musical instruments, nudity.
- Text moderation: slurs, adult content, abusive content.
- Action: auto-block + notify + log + admin review.
- Approach:
- Phase 1 (MVP): open-source + rule-based checks (fast, low cost).
- Phase 2 (Scale): stronger ML or paid API if needed.

2. Anti-Outside-Contact Sharing

- Block phone/email/WhatsApp/Telegram/FB/IG/URL sharing.
- Detect split formats:
- “gmail” split + ID in another message
- number in words (one two three)
- symbols like “dot”, “at”, “com”
- Actions: warn + auto-delete + repeated violation = restriction/ban.
- Admin dashboard: logs + user violation history.

Analytics (Must Have in First Release)

- User funnel: signup → match → message → contract → deal.
 - Chat analytics: message count, response time, active users.
 - Business: successful deals, retention, churn indicators.
 - Admin: flagged content, violations, blocked attempts.
-

What I Need From You Tonight Please answer these so we lock the backend plan:

1. **Database Choice:** PostgreSQL or MongoDB?
2. **Moderation Level:** strict (block instantly) or warn-first?
3. **Language Filter:** English only or Bengali+English?
4. **Admin Roles:** Who can review flags (owner/admin/mod)?
5. **Penalties:** warning → timeout → ban or direct ban?
6. **Analytics Priority:** Which 5 metrics are most important for you?

I'm ready to move immediately after your answers. 3/11/26, 12:33AM - Cyber Code Master:

Sorry brother, it's a little late, I can't give these just by saying them, it takes a little time

3/11/26, 3:30AM - Shakibul hasan Shaun: Ok 3/11/26, 3:32AM - Shakibul hasan Shaun: I will see the whole thing and let you know the details In Sha Allah 3/11/26, 6:03AM - Shakibul

hasan Shaun: 1)Database: PostgreSQL,

2) First, the offensive message will be deleted automatically, it may be a means of communication or something bad, Then you will be warned through notification and detailed guidelines will be shown again, The same will be done a maximum of three times, Then restrictions will be given, that is, he will not be able to contact anyone else. The first time he will be punished for 24 hours, if he makes such a mistake again for 48 hours, if he makes such a mistake again for a week, the last account will be banned,

If desired, you can apply to reopen the account by paying a fine of a certain amount. (Another important thing is that our notifications will not be incomplete like other applications, everything will be explained beautifully so that he can understand the main reason because other systems are like that, they are limited to only those within the guidelines, then when he makes a mistake, they directly block him, the reason for the mistake or if this mistake is repeated so many times, it will be a problem, they do not mention these things. This is a terrible problem for a user, but we will bring the solution here)

(This is not an answer to the question, I am just reminding you that if someone creates a new account, he will be given 5 dollars. Do you remember this? It is important to implement it, then maybe we can sell the verification batch quickly)

3. Both Bangla and English

4. By flag, I understand that the warning message will reach whoever understands it, the answer is that it will go to the admin, the owner, and the person who made the mistake, to all three so that there is no problem, so that it is completely safe

5. Are number two and number 5 the same type of question, please explain to me a little

6. I need to give a little more information here. I am separating

3/11/26, 7:10AM - Shakibul hasan Shaun: (Buying House / Enterprise "Advanced Analytics" may have many metrics, but in reality 5 metrics are the most important.

1 Buyer Request Match Rate

What it measures: How many of the buyer requests that the Buying House is seeing can be fulfilled by its connected factories.

Formula: $\text{Matched Requests} / \text{Total Relevant Requests}$

Why it matters: It will show whether the Buying House's factory network is really useful.

Insight:

Low match → new factory needs to be connected

High match → network strong

2 Lead → Deal Conversion Rate

What it measures: How many buyer conversations are finally converted into contracts / orders.

Formula: $\text{Contracts Signed} / \text{Buyer Conversations}$

Why it matters: It directly shows business efficiency.

Insight:

High leads but low deals → negotiation or pricing problems

Low leads → visibility Problem

3 Factory Response Speed

Measures: How quickly the factory or buying house responds after a buyer request.

Metric: Average First Response Time

Why is it important: In B2B procurement, speed = deal win

Insight:

Slow response → buyer chooses another supplier

4 Buyer Demand Trend

Measures: Which product is being requested the most.

Example analytics:

Top Requested Products:

T-shirt

Denim

Polo

Hoodie

Sportswear

Why is it important: Buying house will understand which factories need to be connected more.

5 Trusted Deal Score

Measures: Successfully completed deals through the platform.

Metric:

Completed Contracts

Dispute Rate

Buyer Rating

Score Example:

Trust Score = Completed Deals

- Buyer Rating
- Disputes

Why is it important: Trust in the B2B market reputation = future deals

In short (5 most important)

What do metrics mean

Buyer Request Match Rate Network strength

Lead → Deal Conversion Sales efficiency

Response Speed Competitiveness

Buyer Demand Trend Market insight

Trusted Deal Score Reputation

An important strategic point

If you give 100 metrics in advanced analytics, no one will use it.

Rule: Keep only 5-7 core metrics in the dashboard And give deep analytics on a separate page.

If you want, I can show you one more important thing:

If there are any 3 analytics features in a B2B marketplace, your platform will be more useful than Alibaba.

(This is a very strategic design issue)) 3/11/26, 7:10AM - Shakibul hasan Shaun: Short answer: Not quite.

The 5 I mentioned are important, but the 5 most important metrics for you as a B2B marketplace owner should be a little different.

Reason: You are not just building a platform for Buying House — you are running an entire marketplace platform.

So your platform success metrics will be different.

The 5 most important metrics as a B2B Marketplace Owner

1 Buyer → Supplier Match Success Rate

What percentage of buyer requests are actually matched with suppliers.

Formula $\text{Buyer Requests matched with supplier} / \text{Total Buyer Requests}$

This is the most important reason:

The main function of the marketplace is matching.

If there is no match, the entire platform fails.

2 Active Buyer vs Active Supplier Ratio

You need to see whether there are more buyers or more suppliers in the marketplace.

Ideal ratio (B2B):

1 Buyer : 3–5 Suppliers

If so:

More suppliers → no one will get work

More buyers → supply shortage

This is the marketplace balance metric.

3 Request → Contract Conversion Rate

How many digital contracts are being created from buyer requests.

Formula

Contracts / Buyer Requests

This will directly show:

whether the platform is actually generating business.

4 Time to First Qualified Response

How quickly the first verified supplier responds after a buyer request.

Example:

Average = 2 hours

If so:

24h → buyer leaves

1h–3h → strong marketplace

5 Repeat Buyer Rate

Whether a buyer returns to the platform.

Formula

Returning Buyers / Total Buyers

This is very important in B2B.

Reason:

A satisfied buyer can do business for 5-10 years.

The 5 Most Important (Final)

Why Metrics Matter

Buyer–Supplier Match Rate marketplace core function Active Buyer vs Supplier Ratio supply-demand balance Request → Contract Conversion real business generated Response Time buyer retention Repeat Buyer Rate long-term growth

What many founders don't understand

Traffic is not important in a marketplace.

Most important:

Matching Efficiency

Alibaba, Upwork, Fiverr — all marketplaces optimize this metric.

If you want, I can show you another important thing:

There are 3 metrics on your platform that Alibaba or Global Sources don't have — but if they did, your platform would be much stronger.

This part is very strategic.

3/15/26, 3:55AM - Shakibul hasan Shaun: Buying house should be given the option to post products. It would be good to have a history of which products have been viewed 3/15/26, 3:59AM - Shakibul hasan Shaun: Good but it seems that these issues have been discussed in detail before. And you showed everything by creating a page with screenshots. 3/15/26, 5:03AM - Cyber Code Master: oi somoy just ui design niye silo eakhon ui+backend 2tai kaj korsi 3/15/26, 5:38AM - Shakibul hasan Shaun: ঐ 3/15/26, 5:39AM - Shakibul hasan Shaun: Another thing is that when someone makes a new account, they will get 5 dollars which they can use to buy any of our services 3/15/26, 5:39AM - Shakibul hasan Shaun: No need to use any code, only if someone makes a new account, they will get it. 3/15/26, 5:39AM - Shakibul hasan Shaun: But on the back end, we need a user tracking system, how many people clicked, how many people entered the first page, etc. 3/15/26, 5:39AM - Shakibul hasan Shaun: Again, how long does a user stay on our site? This information is needed 3/15/26, 5:40AM - Shakibul hasan Shaun: Maybe I gave some important information earlier, I don't even remember, that's why I was doing documentation from the beginning, Then it would have been possible for us to create an output of the highest quality,

When we fully enter it, the amount of brainpower we can use and think a lot and come up with some ideas, when we go outside of it, they are erased and forgotten in the same way 😊

3/15/26, 7:08AM - Shakibul hasan Shaun: And for verification, \$6.99 will be charged per month. This will be for general buyers. Or give it to everyone. 3/15/26, 7:08AM - Shakibul hasan Shaun: So that we can sell at least something in the beginning 3/15/26, 7:09AM -

Shakibul hasan Shaun: I remembered another important thing and I gave you earlier which is basically like implementing it in the back end.

But I forgot 😊

Anyway, I sent an email about the search engine filter, probably check it out, I sent it a long time ago since I'm building the back end now, I need it 3/15/26, 7:10AM - Shakibul hasan Shaun: The important thing I remembered is: The amount of documents we took from them while selling the verification volume, including many documents including trade licenses, are different documents for the three types of accounts, but I gave you detailed information about this.

Implement accordingly 3/15/26, 7:10AM - Shakibul hasan Shaun: Because I researched there and mentioned the names of some very common licenses that will ensure that the accounts are safe and users can easily provide that information
